

Irrigation Page Scope

▼ Back-End Functionality

- Admin should be able to add, edit, and delete **Irrigation Categories**. **Irrigation Category** fields include:
 - Category name
 - Category Page Text (*Use a text editor that can make font formatting changes and, if possible, add photos to the text editor*)
- Admin should be able to add, edit, and delete **Irrigation Services**. **Irrigation Services** fields should include the following:
 - **Irrigation Category** Selection Menu
 - Service Name
 - Page Text (*Use a text editor that can make font formatting changes and, if possible, add photos to the text editor*)

▼ Front-End Functionality

- In the Nav Bar, the tab “Irrigation” should be a dropdown menu, populated by all Category Names
- When the user clicks on an **Irrigation Category**, they will be taken to an entry page containing the following:
 - Category Name
 - Self-Updatable Page Text
 - A selection of Irrigation Service buttons, populated by all Services associated with that Category
- When the user clicks on a Service, they will be taken to a detail page containing the following:
 - Service Name

- Self-Updatable Page Text
- A selection of Irrigation Service buttons, populated by all Services associated with the chosen Irrigation Category
- A link that says “Return to *Insert Irrigation Category Here.*” This takes the user back to the Category entry page.
